

File 1 — REZERVA Platform Dashboard Specification v1.0 (March 2026)

This document defines the full product architecture for **Rezerva**, a Portugal real-estate platform built around strict **data isolation**, role-based access, and a multi-stakeholder workflow.

Core concept

Rezerva is designed so that **each stakeholder only sees their own data layer**. This is enforced at the database level with **Row Level Security**. The platform is built on trust, privacy, and controlled visibility across all parties.

Account model

There are **3 account structures** and **8 stakeholder types**:

- **Individual**: buyers, sellers, international agents
- **Individual + Agency Layer**: licensed AML agents
- **Company**: family offices, institutional buyers, developers

Main stakeholders

- Seller
- Buyer
- Agent
- International Agent
- Family Office / Institutional Buyer
- Developer
- Admin / Fairbank RE

Main modules

- **Fair Price Index (FPI):** pricing reality check based on confirmed transactions
- **Market Wind:** demand pressure and market trend intelligence
- **DocCheck:** document readiness and compliance
- **Predictive Sourcing:** detects seller intent before listings go live
- **Dev DD / Developer Database:** developer due diligence and project intelligence
- **InspectOS:** independent property/development inspection and booking
- **Transaction Tracker:** tracks listing, introduction, CPCV, Escritura, closing

Seller dashboard

The seller experience is intentionally simple and process-driven because sellers need clarity, not exploration.

Key seller features:

- **Mode 1:** fully agent-managed
- **Mode 2:** collaborative portal for intent capture and paperwork

Important seller screens:

- **Demand Pressure Panel:** shows buyer demand before asking for commitment
- **Fair Price Index:** displayed before asking price input to anchor expectations
- **Document Manager:** step-by-step document checklist with upload guidance
- **Listing Status Tracker:** always shows current stage and next action
- **Introduction Approval:** seller approves or declines anonymous buyer introductions
- **Transaction Tracker:** becomes active after CPCV

Buyer dashboard

The buyer dashboard is built around 3 anxiety points:

1. Am I seeing everything?
2. Am I paying the right price?
3. Will the purchase unravel?

Key buyer features:

- **Deep Mandate Intake:** detailed buyer brief covering property, location, timeline, household, financial, motivation
- **Match Feed:** anonymized property passports with FPI badge and DocCheck status
- **Market Wind:** district-level demand and competition intelligence
- **Certification Progress:** Level C → B → A, with verification steps
- **InspectOS booking:** pre-purchase inspections
- **Transaction Tracker:** introduction, CPCV, cost calculator, required documents

Agent CRM

Agents can manage both seller-side and buyer-side business in one CRM.

Key agent features:

- **Master dashboard** with pending actions
- **Seller client manager**
- **Valuation studio** for FPI analysis
- **Buyer mandate manager**
- **Co-brokerage manager**
- **Gesture Link hub** for referral tracking
- **Agency layer** for directors

Important rules:

- Agents can have both seller and buyer clients, but the platform does **not manage dual-agency conflicts**
- The platform emphasizes **first-look windows** for agents on buyer matches
- AIRCS visibility can be controlled: agent-only, first 48h, or simultaneous

International agent dashboard

International agents are referral partners, not Portuguese transaction representatives.

Key features:

- Client tracking
- Invite-a-client flow
- Referral earnings tracker
- Portugal market intelligence
- Regulatory updates and transaction guidance

Family office / institutional buyer dashboard

This is the most data-rich company account, with access to:

- active mandates
- enhanced property passports
- full FPI breakdown
- developer due diligence database
- market intelligence
- portfolio tracker
- development inspection tracking

Roles:

- **Principal**
- **Portfolio Manager**
- **Analyst**

Developer dashboard

Focuses on capital timing, pre-sales, and investor matching.

Key features:

- project pipeline
- data room per project
- investor matching
- InspectOS development tracking

- regulatory tracker

Predictive sourcing

A major differentiator. The platform detects pre-listing intent using signals like:

- incomplete DocCheck sessions
- PropCheck tool usage
- energy certificate requests
- portal withdrawal monitoring
- inheritance or mortgage distress signals
- renovation permit activity

This is used to:

- alert buyers
- support agent outreach
- inform family office intelligence
- trigger seller intent capture

Admin / Fairbank RE dashboard

This is the operational control center for:

- full pipeline monitoring
- urgent task handling
- Fizbo automation
- PropCheck high-intent alerts
- intelligence operations
- predictive model monitoring
- data licensing readiness

Big picture

Rezerva is not just a property portal. It is a **role-separated real estate intelligence and transaction platform**. Its value comes from:

- strict privacy and access control
- verified and structured data
- intelligent matching
- demand and pricing visibility
- workflow automation
- predictive sourcing
- inspection and compliance support

Very short AI memory version

Rezerva is a Portugal real-estate platform spec with 8 stakeholder types and 3 account models, built on RLS-based data isolation. Core modules are FPI, Market Wind, DocCheck, Predictive Sourcing, InspectOS, Developer DD, and Transaction Tracking. It has customized dashboards for sellers, buyers, agents, international agents, family offices, developers, and admin/Fairbank RE.

File 2 — REZERVA Website Developer Briefing (March 2026)

This document is the **full website handoff** for Rezerva. It defines the **brand rules, sitemap, page structure, language system, component library, technical stack, content workflow, and launch checklist**.

Core purpose

Rezerva is positioned as a **closed professional network** for real estate in Portugal, not a public portal or consumer marketplace. The website must communicate:

- exclusivity
- credibility
- minimalism
- professional infrastructure

Brand direction

The design language is intentionally restrained:

- no flashy effects

- no consumer-style UI
- no gradients for decoration
- simple, confident, private-bank style

Key visual system:

- **Navy** as the primary background
- **Gold** for CTAs and trust accents
- **Slate / dark grey** for text
- **Teal** for certification/investor elements
- light neutrals for cards and alternating rows

Typography, spacing, and layout are tightly specified:

- max width 1200px
- generous vertical spacing
- subtle 4px radius
- strong CTA hierarchy
- mobile breakpoint at 768px

Platform structure

The website is built around **5 connected platforms**:

- **Rezerva** = professional-only main platform
- **Fizbo.pt** = seller intake / FSBO route
- **PropCheck.pt** = buyer and intent source
- **InspectOS** = independent inspection partner
- **Fairbank RE** = internal AMI-licensed operator

Sitemap and access rules

Main public pages:

- Homepage
- </agents>

- `/investors`
- `/developers`

Auth/protected pages:

- `/login`
- `/apply`
- `/dashboard`

Hidden route:

- `/vender` as a seller backdoor, not linked publicly

Important rules:

- all major landing pages exist in **8 languages**
- **Arabic is RTL**
- **language versions are cultural rewrites, not machine translations**
- English is the canonical version
- `/vender` must be hidden and noindexed

Homepage

The homepage is the main conversion hub. It presents Rezerva as:

- private infrastructure
- professional-only
- verified access
- independent intelligence

Core homepage sections:

- hero
- trust bar
- who it is for
- intelligence section
- testimonial/network section

- access CTA
- footer

Agents landing page

Targets licensed agents. Main message:

- better inventory
- verified buyer pool
- independent valuations
- document confidence
- permanent attribution

It highlights common agent pain points:

- unqualified enquiries
- bad valuations
- documents surfacing too late

Investors landing page

Targets investors / family offices / serious buyers.

Main message:

- off-market deal flow
- verified documentation
- professional representation
- market intelligence

It also shows buyer certification levels:

- **Level C** = registered
- **Level B** = verified
- **Level A** = capital verified, 48h first-look

Developers landing page

Targets developers through direct outreach only.

Main message:

- Rezerva is not a listing portal
- it structures deals
- it brings qualified capital
- it manages the process from introduction to close

This page has:

- confidential tone
- no broad public navigation path
- a conversation-first CTA

Application form

The application form is the main conversion point for agents and investors.

It is designed as a **structured professional intake**, not a casual marketing form.

Agent fields include:

- name
- email
- phone
- AMI licence
- agency
- market
- property types
- transaction volume
- referral source
- GDPR consent

Investor fields include:

- name
- email

- organization
- investment focus
- target geography
- ticket size
- existing representation in Portugal
- contact preference
- GDPR consent

Important rule:

- after submission, there is **no instant dashboard**
- users get a review message and hear back within **5 working days**

Component library

Reusable UI components are specified for:

- navigation
- stakeholder cards
- feature boxes
- problem cards
- intelligence cards
- certification cards
- testimonial cards
- stat blocks
- language toggle

These must work in both **LTR and RTL**.

Technical requirements

The stack is fixed:

- **Next.js 15**
- **Tailwind CSS**

- **Supabase Auth**
- **Supabase PostgreSQL**
- **Vercel**
- **Resend**
- **next-intl or next-i18next**
- Markdown-based content

Performance targets:

- LCP under 2.5s
- CLS under 0.1
- FID/INP under 100ms
- Lighthouse over 90 on desktop
- mobile over 80
- Arabic RTL must be tested carefully

SEO requirements:

- page-specific meta titles/descriptions
- hreflang for all 8 languages
- canonical English pages
- `/vender` excluded from search
- no dashboard/admin routes in sitemap

Content handoff

All copy is already written in Markdown. The dev team must:

- not rewrite it
- not machine-translate it
- treat the cultural-language versions as final
- use the Markdown structure as the content map

Launch checklist

Before launch:

- all 32 language pages must work
- Arabic RTL must render correctly
- Mandarin and Arabic fonts must load properly
- forms must submit correctly
- no broken CTAs
- no missing translation keys
- GDPR checkbox required
- OG tags correct
- testimonial placeholders removed
- SSL active
- no consumer branding leakage

Very short AI memory version

Rezerva Website Developer Briefing defines a closed professional-network website for Portugal real estate. It specifies brand system, sitemap, 8-language structure, landing pages for agents/investors/developers, hidden seller route `/vender`, a structured application form, reusable components, Next.js 15 + Tailwind + Supabase stack, and strict launch/SEO/RTL requirements.

File 3 — Portugal Property Market Tactical Outlook (2025–2028)

This text is a **market strategy brief** about Portugal's property market, focused on how demand, supply, taxes, foreign capital, and interest rates are reshaping the market between **2025 and 2028**.

Core market headline

Portugal reached a **record €41.2 billion** in property transactions in **2025**, with **169,812 transactions** and **17.7% annual price growth**. The market then hit an **inflection point in March 2026** because of rising **Euribor** and geopolitical shocks.

Main demand driver: young buyers

A major part of the market is being pushed by the **under-35 buyer segment**:

- they account for **54% of primary residence mortgages**
- the **Garantia Pública** enables **100% financing**
- it applies to properties up to **€450,000**
- the **IMT Jovem** incentive removes transaction taxes for eligible purchases
- by end of 2025, **25,500+ young buyers** had used the guarantee

Resulting effect

This stimulus is creating:

- **inventory scarcity**
- faster sales in the **€200k–€450k** segment
- compressed time on market for **T1/T2 apartments** in cities, often **30–45 days**
- strong upward pressure on entry-level pricing

Affordability problem

Even with support measures, Lisbon remains highly unaffordable:

- a **90 m² apartment in Lisbon** costs about **22.5 years of median household income**
- the lower half of the market is being artificially supported and inflated

Foreign capital segment

Foreign demand is shifting from speculative investing to **lifestyle relocation and tax arbitrage**:

- **Brazilian buyers** dominate foreign volume, with nearly **10,000 purchases in 2025**
- **American buyers** have grown sharply and now lead the luxury tier
- the average American purchase is around **€479k**
- the old tax-advantaged non-habitual resident path is closed to most buyers

- the replacement regime, **ICFI**, is limited and does **not benefit rental-income investors**

Supply-side problem

Portugal is not just facing demand pressure. Supply is constrained by:

- a **36% surge in new family housing permits** after Simplex reform
- but a **90,000-worker construction deficit**
- so many permits do **not become actual inventory**

Interest-rate risk

The market is also exposed to debt costs:

- over **90% of mortgages are variable or mixed rate**
- the **6-month Euribor rose to 2.504% in March 2026**
- this creates risk for borrowers and pressure on the whole market

Regional pricing and yield shift

Lisbon is becoming expensive and low-yield:

- municipality average: about **€5,200/m²**
- prime launches above **€9,000/m²**
- gross yields in prime zones are often **below 4.5%**
- ultra-prime areas can be as low as **3.0%–3.5%**

Because of that, capital is rotating to better-yielding areas:

- **Porto**
- **Braga**
- **Setúbal Peninsula**
- **student housing**
- gross yields can reach **6%–7.6%**, depending on segment and location

Strategic takeaway

The brief argues that the Portuguese market is becoming **split into two realities**:

1. a state-supported, highly competitive entry-level market
2. a yield-seeking institutional market moving into secondary cities

The message is that advisors and investors must adapt to:

- youth financing rules
- tax complexity for foreign buyers
- regional yield opportunities
- supply bottlenecks
- interest-rate sensitivity

Very short AI memory version

Portugal's 2025–2028 property outlook shows a €41.2B market split by strong youth demand, limited supply, rising Euribor, and foreign capital rotation. Lisbon is overvalued and low-yield, while Porto, Braga, Setúbal, and student housing offer stronger yields. Advisors must understand Garantia Pública, IMT Jovem, foreign tax regimes, and regional yield shifts.
